

**Amendments to the Specification:**

Please replace paragraph 43 with the following amended paragraph:

An article 10d is depicted in Figure 15 in order to provide another example of an application for textiles joined through the method of the present invention. Article 10d represents an article of apparel, such as a shirt or jersey that includes a first textile element 20d, a second textile element 30d, and an adhesive element 40d that may be joined with a third textile element 60. The shape of the third textile element 60 is similar to the shape of the second textile element 30d, but slightly larger. The third textile element 60 may define an aperture 62 to permit the second textile element 30d to be visible through the third textile element 60. Adhesive element 40d, as illustrated in FIGS. 13-15, is shaped to have an outer perimeter substantially similar to that of the third textile element 60. The inner perimeter of adhesive element 40d is located in a spaced relationship with the outer perimeter such that a space is defined through which a portion of the second textile element 30d may be visible.
